

Universal Patinas

The star indicates a non-acid product.

Universal Patinas may be used on any type of metal as well as the Metal Coatings. They are non- acid, non-reactive, and slightly opaque. They may be blended or layered with each other to achieve different colors. They may be applied over a traditional patina to add or enhance a color. Apply in a hot or cold technique reapply to darken the color or burnish back to lighten.

Dye Oxide Patinas

The star indicates a non-acid product.

The Dye Oxide Patinas are very similar to the Universal Patinas in use and application. They may be used on any type of metal as well as the Metal Coatings. They are non- acid, non-reactive. The dye oxides may be blended with the Universals as well as layered over them. The Dye Oxide Patinas differ from the Universal Patinas in that they are **transparent** colors and they may be added **into** a traditional patina (as well as layered over)
